Setting Vanity Links for Your Event

Vanity URLs are a paid feature in Goldcast. If interested, contact your CSM to discuss pricing and options.

You can set up custom vanity URLs for the web pages of your events and series. A vanity link is a shortened web address that's customized to match your company's domain or event's branding and theming. They're easy to remember, and using them in event promotions and marketing campaigns is a great way to boost brand awareness.

Why opt for vanity URLs?

Typically, the web pages that Goldcast creates for your event/series have the Goldcast domain (goldcast.io) in the URL like

Event Registration Page	https://registration.goldcast.io/events/eventID
Event Page	https://events.goldcast.io/splash/eventID
Hub Page	https://eventhub.goldcast.io/?eventHubId=HubID
Series Registration Page	https://registration.goldcast.io/series/seriesID

Where Event ID/Hub ID/Series ID is a randomly generated string of alphanumeric characters.

As you can see from the above examples, each link has the Goldcast domain (goldcast.io) in them. Opting for vanity links allows you to skip the Goldcast domain and use your preferred subdomain (like your company's website).

Registration page	https://subdomain.company.com/events/eventID
Event Page	https://subdomain.company.com/splash/eventID
Hub Page	https://subdomain.company.com/?eventHubId=HubID
Series Registration Page	https://subdomain.company.com/series/seriesID

You can use any subdomain of your choice. There are no restrictions. You can also opt for sub-subdomains if you require. However, you need to make sure that you own the root domain and have created the desired subdomain.

With vanity URLs, the magic links sent to registrants and speakers will automatically reflect the subdomain you've chosen. Here's an example:

Standard Magic Link	With Vanity URL
https://events.goldcast.io/auth/link/register_email/123456?eventID=1234abc	https://subdomain.company.com/auth/link/registered_email/123456?eventID=1234abc

Now that you understand the benefits of setting vanity links for your Goldcast events, let's take a look at the two types of vanity links that you can choose from.

Organization and asset-level vanity links

We allow setting up two levels of vanity URLs.

Organization-Level	Asset-Level
At the organization level, you can set up: • One subdomain for all event registration, series registration and hub pages (And) • Another subdomain for all event pages	At the asset level, you can either choose: • Different subdomains for all your pages (Or) • Or you can use a common subdomain for event registration, series registration, and hub pages, with different paths for each, and a

	separate subdomain for event pages. Note: For series registration pages the path can't be customized. Our standard pattern will be used
Cons: You cannot have different organization-level subdomains for series, registration and hub pages. It has to be the same for all.	Pros: You can set up different subdomains for each asset.
Pros: You don't have to contact the Goldcast support team to set up vanity URLs for each new event. Every event registration, hub, event, and series registration page will automatically use the subdomain you chose with a path that includes the event ID/hub ID/series ID.	Cons: You must contact Goldcast support to set up vanity URLs for each event, hub, or series.
Cons: At the organization level, event registration and hub pages will include the event ID and hub ID, respectively. - For event registration pages: https://subdomain.company.com/events/1234abcd - For hubs: https://subdomain.company.com/?eventHubId=1234abcd You can customize only the subdomain.company.com part of the URL. The rest is automatically generated.	Pros: Event registration and hub pages do not include the event ID/hub ID. For event registration pages: https://subdomain.company.com/regpage1 https://subdomain.company.com/regpage2 https://subdomain1.company.com For hubs: https://subdomain.company.com/hub1 https://subdomain.company.com/hub2 https://subdomain2.company.com

Limitations when setting vanity URLs

Limitation 1

Currently, the URLs for **event** and **series registration pages** must have the event ID and series ID, respectively.

So, regardless of whether you're setting up these pages at the organization or asset level, you can customize only the subdomain. The rest of the path is non-customizable.

- Event Page: <https://subdomain.company.com/splash/1234abcd>
- Series Registration Page: <https://subdomain.company.com/series/1234abcd>

Only **subdomain.company.com** is customizable.

Limitation 2

Irrespective of whether you've set up organization- or asset-level vanity links, the subdomain for your **registration** and **event pages** MUST differ. You cannot use the same subdomain for both.

Limitation 3

You can request a vanity link only for a subdomain (*.example.com) and NOT for your root domain (example.com).

How to submit a vanity URL request

- You can apply for a vanity URL by submitting the **subdomains** you want to be associated with your event to support@goldcast.io.
- Specify if you want to set it up at the organization or asset- level.
- If you plan to use a common subdomain for hub and event registration pages at the asset level, specify the path/slug you want to set up for each.

Note: The Goldcast team requires 72 business hours to set up vanity links for your event. So, kindly make your requests ahead of your event.

Setting up a DNS record

Once our team has received your request for a vanity link, we'll respond with a **record name** and **value**, which you need to add to your domain's DNS records.

It would look like this:

Record Name	_9fc7c3baf9f21329e45bab6f98c081bd.your domain.com.
Record Value	_fde6219f84f21e2828f0ac6235240ebd.xtsd crbgyf.acm-validations.aws.

Once you receive these values from us, you must edit your **DNS records** to modify the Record Name and Value.

This process varies depending on your DNS provider. The following links provide further instructions for adding DNS records to specific platforms:

- [GoDaddy](#)
- [Ionos](#)
- [Bluerock](#)

- [WordPress](#)
- [Squarespace](#)

If you face any issues editing your DNS records, contact your IT support team for technical assistance.

Once you have edited the record name and value in your DNS records, it takes up to 48 business hours for our team to complete the process. We'll notify you once it's done.

Sending SSL certificates

We use AWS (Amazon Web Services) to generate SSL certificates for your vanity links. To activate the SSL certificate, you need to allow the following authorities from your end:

- amazon.com
- Amazon Trust Services LLC
- awstrust.com
- amazonaws.com

For more information about Certification Authority Authorization (CAA), see [AWS Certificate Manager troubleshooting user guide](#).

If you don't want AWS to generate the certificates for your domain and instead want to use your own ones, you can send the certificates along with the corresponding domains to support@goldcast.io.

What's next?

Once we have set up the vanity link, your Goldcast web pages will no longer show the Goldcast domain. Instead, it'll have your chosen subdomain. Similarly, attendee and speaker magic links retrieved from Goldcast Studio or sent via registration emails will reflect it. Attendees can see the vanity link on their browser's address bar when clicking their magic links.

You can use it on your social media pages and other promotional materials to increase brand awareness and credibility.

FAQs

- 1. I have set up organization-level vanity URLs. Would it be possible to have a different one for a specific event?**

Yes. If you have set up vanity URLs at the organization level but want an asset-level domain for one particular event, let us know, and we can set it up for you. In this case, asset-level domains take precedence over org-level ones.

2. At the asset level, can I use the same subdomain for the registration pages of different events?

Yes. If you've set up asset-level vanity URLs, you can append slugs to a subdomain and set it up for different events. For example, if your preferred subdomain is registrationpage.company.com, you can use it for different events like:

- registrationpage.company.com/event1 (/event1 is the slug)
- registrationpage.company.com/event2 (/event2 is the slug)

You can use the first link to handle registrations for Event 1 and the next one for Event 2. There's no limit on the number of slugs you can have for a specific subdomain.

This works for event hubs as well. At the asset level, you can use a single subdomain for different event hubs by appending slugs. Here's an example of how you can do it:

- eventhub.example.com/2022events
- eventhub.example.com/2023events
- eventhub.example.com/2024events

Note: Currently, we do not support slugs for series registration pages.

3. Can I reuse a previously used asset-level vanity link for a future event?

Yes. However, reusing an asset-level vanity URL will cause you to lose previous mappings. For example, if an attendee visits the page of the past event to access on-demand content, they might not be directed to the correct event. So, if you're reusing existing vanity URLs for other events, ensure your attendees no longer need them.

4. Can I use a sub-subdomain for my vanity URL?

Yes. For example, your vanity URL can include a sub-subdomain like attend.events.companyname.com.

5. When should I request a vanity URL?

We highly recommend requesting a vanity URL while you're in the initial stages of planning an upcoming event. Preferably before you send out magic links to attendees. This way, your attendees enjoy a consistent experience from start to end.

6. Can I modify a vanity URL after I have requested it?

Yes. You can request a modification by sending an email to support@goldcast.io. If you change the subdomain, we'll provide the new records. If you're only changing the slug, we can do it from our end without you needing to edit your DNS records.

7. Can I set up a vanity URL for a series registration page without the series ID?

No. Currently, we offer vanity URLs for series registration pages with the series ID added like this: <https://subdomain.company.com/series/1234abcd>. We cannot support vanity URLs like <https://subdomain.company.com/series> or <https://seriesregistrationpage.company.com>.

Glossary

URL: The complete address of a web page, like

`https://events.goldcast.io/splash/1234abcd`

Domain: The unique name of a website, like `company.com`

Subdomain: A section before the main domain, like `events.company.com`

Sub-subdomain: Two sections before the main domain, like

`attend.events.company.com`

Path: The location of the specific page within the website, like

`company.com/events/1234abcd`

Slug: The last part of the URL. This is often readable and descriptive of the page, like

`/2024events`

Vanity URL: In our context, vanity URLs are links to the event registration page, event page, hub page, and series registration page without the goldcast.io domain.
