

Who can use this feature

- Supported on **Foundation**, **Growth**, and **Scale** plans

During an external audit, auditors document findings to address any issues or noncompliances they identify. Once a finding is created, your goal is to close it systematically. Closing an audit finding involves resolving identified issues or observations and ensuring that corrective actions have effectively mitigated associated risks. This structured workflow facilitates seamless communication and review between auditors and assignees, significantly improving efficiency in managing audit requests and findings throughout the compliance lifecycle.

How Does the Finding Closure Workflow Work?

The Audit Finding closure process in Scrut follows a structured, multi-step approach that ensures thorough documentation, review, and resolution. Below is a detailed breakdown of each stage:

Step 1: Creating an Audit Finding

What happens: An audit finding is created in Scrut to document an identified issue, gap, or observation that requires attention.

Who performs this action: The auditor or audit team

Key details:

- See here for step-by-step instructions on [creating an audit finding](#).
- The finding begins with an initial status of **“Open.”**

The screenshot displays the Scrut Automation web application. On the left is a sidebar with navigation options: Setup Wizard, Dashboard, Tests, Compliance (expanded), Frameworks, Controls, Policies, Evidence Tasks, Cloud, Vault, Risk, Vulnerabilities, Trust, Audit, and Audit Center (highlighted). The main content area shows a specific audit finding titled "Missing Documentation for Fixed Asset Disposals". At the top right of this finding card is an "Open" button, which is highlighted with a red box. Other buttons include "Submit For Review" and a menu icon. The finding details include: Audit Name (ISO 9001:2015 Audit), Description (Disposal forms and authorization approvals not maintained for 15 out of 42 asset disposals reviewed during Q3 2024), Assigned to (No Assignee), Department (Devops), and Nature of Finding (Minor). Below the details are sections for "Uploaded Artifacts" (showing one artifact) and "Linked Items" (showing three items). At the bottom is a table with columns: Item Name, Item Type, Status, and Actions.

Step 2: Assignee Takes Action

Once the finding is created, the assignee is responsible for addressing it. They can either:

- **Upload a relevant artifact**
 - Attach supporting documents, screenshots, reports, or other evidence directly related to the finding.
 - When to use: When you have existing files that demonstrate compliance or resolution.
 - How to do it: [See here](#)
- **Link an existing artifact**
 - Link artifacts that already exist in Scrut.
 - When to use: When relevant evidence has already been uploaded to Scrut.
 - How to do it: [See here](#)
- **Create a new artifact and link it**
 - Create a new artifact in Scrut and link it with the finding.
 - When to use: When you need to create documentation specifically for this finding.
 - How to do it: [See here](#)
- **Create a Corrective Action**
 - Initiate formal corrective action plans when the finding requires specific remediation steps, process changes, or ongoing monitoring.
 - When to use: When resolution requires multiple steps, involves cross-functional teams, or needs tracking over time.
 - How to do it: [See here](#)

Step 3: Submitting for Auditor Review

What happens: Once the assignee has gathered the missing evidence and completed necessary actions, they then submit it for auditor review.

Who performs this action: Generally, the assignee or other admins in Scrut

Key details:

1. Review all uploaded artifacts and corrective actions to ensure completeness
2. Verify that all evidence adequately addresses the audit finding
3. Click the **Submit for Review** button located at the top right of the finding details page

The screenshot displays the Scrut Automation interface. On the left is a navigation sidebar with options like Setup Wizard, Dashboard, Tests, Compliance, Frameworks, Controls, Policies, Evidence Tasks, Cloud, Vault, Risk, Vulnerabilities, Trust, Audit, and Audit Center. The main content area shows a finding titled 'Missing Documentation for Fixed Asset Disposals' with a red box highlighting the 'Submit For Review' button in the top right corner. Below the title, it shows the audit name 'ISO 9001:2015 Audit', a description of missing disposal forms, and assigned details (No Assignee, Devops, Minor). There are sections for 'Uploaded Artifacts' (showing one artifact) and 'Linked Items' (showing three items). The bottom of the page features a table with columns for Item Name, Item Type, Status, and Actions.

What happens next:

- Scrut sends an email notification to the assigned auditor.
- The finding status automatically changes to **"Needs Review."**

Step 4: Auditor Review

What happens: The auditor examines the submitted evidence, artifacts, and corrective actions to determine if the finding has been adequately resolved. The auditor can then:

Close the Finding

If the auditor determines that the submitted evidence fully addresses the finding and adequately mitigates the identified risk, they click the **Close Finding** button at the top of the finding page. The finding status changes to **“Closed.”**

Request Revision

If the auditor determines that the evidence is insufficient, incomplete, or doesn't fully address the finding, they can click the **Request Revision** button at the top of the finding page. In the Request Revision dialog window, the auditor enters additional information, such as corrections or whether different evidence is required. The finding status changes to **“Needs Revision,”** and Scrut sends an email to the assignee.

Step 5: Revision Cycle and Final Closure

After receiving a revision request, the assignee addresses the feedback and resubmits for review. After the assignee uploads the revised artifact and clicks the **Submit for Review** button, the status changes back to **Needs Review**. Once the auditor approves the revision, the finding goes to **Closed** status.

Note: The revision cycle can repeat as many times as necessary until the finding is satisfactorily resolved. The complete list of submissions and revisions is captured in the audit log.

Status Summary

For quick reference, here are all the possible finding statuses throughout the workflow:

Status	Meaning
Open	Finding has been created
Needs Review	The assignee has submitted the finding for auditor review
Closed	The finding has been resolved and accepted
Needs Revision	The auditor has requested additional work
